Science	<p>No science</p> <p><i>Some topics require children to ‘make observations and notice changes over time. The provision for these topics often requires an earlier start than the term which has been designated for delivery. In year 4 that topic is: Living things and their habitats.</i></p> <p>This topic requires planning for making observations throughout the school year.</p> <p>A suggested learning journey re making observations over time is:</p> <p>Set up observations early on during the school year by showing the children a couple of photos or a youtube video illustrating the effects of the passing of time in relation to the focus phenomena e.g. two pictures of the school grounds, one taken during late autumn and the other in late spring. Use these as the basis for a session raising scientific questions to be investigated. With the children’s involvement identify 2 or 3 questions to focus upon re exploring further. Designate a display board on which to capture observations over a period of time e.g. throughout the school year. Collect observations, children’s drawings & observation notes (e.g. of birds and animals seen) & photographs throughout the year and display these on the display board in sequence. Involve the children in collecting the data/observations relating to the phenomena to investigate, contrast & compare noting the significant changes and observations/learning can be pulled together in order to determine what has been found in relation to the children’s initial questions. Mini plenaries could be held towards the end of each term noting any significant changes throughout the previous half term and prompting children to wonder about/predict what will happen next.</p>
